A SYSTEM FOR ASSISTING MAINTENANCE OF A PARTICLE FILTER
INTEGRATED IN AN EXHAUST LINE OF A MOTOR VEHICLE ENGINE

5

This system for assisting the maintenance of a
particle filter integrated into an exhaust line of a
motor vehicle diesel engine is characterized in that it
comprises means (1) for calculating the volume of ash
10 from the engine lubricating oil, means (2) for
calculating the volume of ash from the engine fuel, means
(4) for calculating the usable volume (V.u) of the
particle filter from a total volume of said filter when
new (V.new) and the previously calculated volumes of ash,
15 and means (5) for calculating a degree of clogging of the
particle filter (d.c.) from the total volume of the
filter when new (V.new) and the previously calculated
usable volume (V.u) to trigger a maintenance request
(Maint Req.) if the degree of clogging (d.c.) exceeds a
20 predetermined threshold (threshold).
